Dawson's Roses: A Growing Tradition

Dawson's Garden World is a family-owned, Western Australian company, which has specialised in growing roses for local gardeners since 1903.

Dawson’s roses have always been famous for their quality and hardiness. To make sure you get the best, Dawson’s roses are grafted onto quality Rosa Fortuniana rootstock - they’re proven to outperform others in WA. Your Dawson’s roses will provide you with year after year of beautiful, colourful blooms.

At Dawson’s we don’t just sell roses, we’ve been helping gardeners get the best out of their rose gardens for over 100 years, so there’s no better place to go for expert rose advice.

Our catalogue is presented in colour groups and we hope this will aid easier selection and comparison of varieties.

You can view our online rose catalogue, rose picture gallery and download rose fact sheets at www.dawsonsgardenworld.com.au

Our knowledgeable staff will be happy to answer your questions on any aspect of rose growing or care. Just ask in-store or email your questions to askdawsons@dawsonsgardenworld.com.au

Because we grow the quality roses we sell, we confidently guarantee them all.

Happy Gardening!

**FLORIBUNDA ROSES**

Clusters of flowers

You can’t beat floribunda roses for sheer garden display. Ideal for borders, mass planting and hedging. If you want colour, think floribundas!

**NEW RELEASE**

**BRINDABELLA LEADING GOLD (2010)** - Golden, buttercup-yellow blooms. Extensively trialled in humid Toowoomba, Queensland, where it has shown high levels of black spot resistance. 120cm.

**ENCORE (2013)** - Simply yet very showy, bright pink, semi double blooms which open fully to reveal centres of golden stamens. A healthy and vigorous grower, ideal for border or mass plantings. Part proceeds of sales to the WVCA Australia, to support their Encore Breast Cancer Program. 125cm.

**NOVALIS (2013)** - Sweetly scented, lavender-mauve blooms. Old rose style, fully double blooms. Easy growing, upright and vigorous grower. Bred by master rose breeders, Kordes of Germany. 100cm.

**SPLICE (2012)** - Fully double, cupped to slightly flattened blooms of gold, fading to pale lemon. The tightly packed and ruffled petals give the flowers plenty of old world style. 70cm.

**THAT’S LIFE (2013)** - A beautiful apricot-pink coloured floribunda bred by South Australian Rosarian, Wendy Mather. Yellow-peach buds open to blushed apricot and pink blooms of somewhat globular form. A vigorous, upright grower that responds well to regular trimming. Received a Certificate of Merit at the Australian National Rose Trials in 2011. 140-180cm.

Planting Roses

Because Dawson’s roses are grown in pots, you can confidently plant them into your garden at any time of year.

1) Before planting, water the rose in its pot.
2) In a sunny location, dig a hole 60cm wide and 45-60cm deep. Mix Dawson’s Garden World Organic Soil Improver with the soil from the hole at a rate of 1 part Soil Improver and 2 parts soil from the hole.
3) Return enough of this mix to the hole to achieve the correct height for the new plant.
4) Take the rose out of its pot, leaving the root ball intact and place in hole. Add 1 tablespoon of slow release fertiliser around the rootball.
5) Return more of the mix around the plant until the soil is level, then add mulch, leaving a 15cm clearance around the stem.
6) Use any left-over soil to make a shallow well around the plant (this will help retain water) and direct into the root system. Water in well (use at least 10 litres of water per plant), ensuring the root zone is thoroughly saturated.
7) Liquid feed fortnightly with Seasol to help stimulate root growth and get plants off to a flying start!

Watering

- Water newly planted roses daily during their first season in the garden.
- Soil wetting agents allow water to penetrate into water repellent, sandy soils. Apply in spring and mid-summer. Or, for a more sensitive to Glyphosate damage and should be pruned out at pruning time. Aphids
- Spray as soon as they appear.

Black Spot & Powdery Mildew
- Spray entire bush thoroughly.
- Spray with fungicide after pruning and again in spring and autumn.
- Control aphids and thrips with systemic insecticide, used monthly. Environmentally friendly sprays are available at Dawson’s.
- Red spider mites are the most troublesome pests of roses over the warmer months. Spray with Mawik*, Natacosp* or Eco-Oil*. Spray twice, two weeks apart, to bring mite populations under control. Predatory mites can also be ordered from your nearest Dawson’s store. Predatory mites feed on spider mites, offering a natural way to control them in your garden. For more information, enquire in-store or see our Predatory Mite Fact Sheet at www.dawsonsgardenworld.com.au
- White Rose Scale - spray with Eco-Oil* or White Oil*. Severely infested canes should be pruned out at pruning time.
- Herbicide Damage - don’t use Glyphosate herbicides near your roses, they are very sensitive to Glyphosate damage and this causes distorted ‘witches broom’ looking foliage.

Mulching

- Use coarse grade mulch applied to the soil at a depth of 5-10cm, leaving a 15cm bare circle around the stem. Never heap mulch or soil up around the stem.
- One of the main virtues of grafting onto Fortuniana rootstock is its vigour and hardness. If you see bright green foliage appearing from below the graft of the plant, simply break it off and discard.

Common Diseases & Pests

- Black Spot and Powdery Mildew are common rose fungal-leaf diseases. They are most prevalent in early-mid spring and again in mid-late autumn when nights are often cool and damp. Diseases are also more likely on roses growing in too much shade. To Control Black Spot and Powdery Mildew spray with rose fungicides such as Eco Fungicide (used in conjunction with Eco OIl, Rose Shield, Triforine or Sharp Shooter Rose Black Spot and Natural Pyrethrum Concentrate). Better still is preventative spraying, every fortnight over mid-spring and again in mid-late autumn.
- Avoid overhead watering and watering in the evening wherever possible.
- Spray with fungicide after pruning and again in spring and autumn.
- Control aphids and thrips with systemic insecticide, used monthly. Environmentally friendly sprays are available at Dawson’s.
- Red spider mites are the most troublesome pests of roses over the warmer months. Spray with Mawik*, Natacosp* or Eco-Oil*. Spray twice, two weeks apart, to bring mite populations under control. Predatory mites can also be ordered from your nearest Dawson’s store. Predatory mites feed on spider mites, offering a natural way to control them in your garden. - White Rose Scale - spray with Eco-Oil* or White Oil*. Severely infested canes should be pruned out at pruning time.
- Herbicide Damage - don’t use Glyphosate herbicides near your roses, they are very sensitive to Glyphosate damage and this causes distorted ‘witches broom’ looking foliage.

Feeding

- Feed roses at regular 4-week intervals from spring to autumn.
- A fortnightly liquid feed, with a combination of Seaso and Powerfeed, is a great addition to your rose feeding program.
- This combination provides all the nutrients required for healthy plant growth.

Staking & Training

- Standards and weeping standards will require a permanent and strong stake for support.
- Weeping roses can be trained by using a ‘rose hoop’, so that it’s easy to tie the branches to develop a lovely shape.

Pruning the easy way

The object of pruning is to shape the bush and promote new blooms. Pruning is done every year in winter while plants are dormant, before new spring growth appears.

- Before starting, make sure pruning tools are clean and sharp.
- Hybrid tea roses, miniatures and floribunda roses can simply be cut back to half of their original height, using secateurs, loppers or even hedge shears.
- Tidy up by removing any crossing branches, diseased older wood or branches growing into the centre of the bush.
- David Austin rose bushes are best pruned by removing one third of their original height each winter.
- Climbing roses should be pruned and trained to restrict them from growing straight up. This is best done by tying new canes to a horizontal position or by arching into a fan shape.
- Weeping standard roses and shrub roses are best clipped and shaped with hedge shears. This can be done continuously after each flowering.
- Immediately after pruning, thoroughly spray bushes with Lime Sulphur.
