HOME RUN (2012) - Rounded, bushy grower, that seems to almost always be in flower. Single, flame red flowers. Mass plant, use as a low hedge, or a rewarding potted rose. Noted for its healthy growth and disease resistance. Australian Rose of the Year 2011. 100cm.

MUTABILIS (Pre 1894) (H) - A healthy and quick growing large shrub. Continually produces masses of single, honey-yellow flowers, which change to pink and red. Wonderful for hedging. 2-3m x 2-3m.

PINK HOME RUN (2012) - This single pink flowering shrub rose has all the healthy growing attributes of the original red flowering, Home Run. Rounded, bushy grower, that seems to almost always be in flower. Mass plant, use as a low hedge, or a rewarding potted rose. Noted for its healthy growth and disease resistance. 100cm.

Dawson’s Rose Growing Guide

For best results, follow these easy growing hints.

Planting Roses
Because Dawson’s roses are grown in pots, you can confidently plant them into your garden at any time of the year.
1) Before planting, water the rose in its pot.
2) In a sunny location, dig a hole 60cm wide and 45-60cm deep. Mix Dawson’s Garden World Organic Soil Improver with the soil from the hole at a rate of 1 part Soil Improver and 2 parts soil from the hole.
3) Return enough of this mix to the hole to achieve the correct height for the new plant.
4) Take the rose out of its pot, leaving the root ball intact and place in hole. Add 1 tablespoon of slow release fertiliser around the rootball.
5) Return more of the mix around the plant until the soil is level, then add mulch, leaving a 15cm clearance around the stem.
6) Use any left over soil to make a shallown around the plant (this will help retain water) and direct into the root system. Water in well (use at least 10 litres of water per plant), ensuring the root zone is thoroughly saturated.
7) Liquid feed fortnightly with Seasoil to help stimulate root growth and get plants off to a flying start!

Watering
• Water newly planted roses daily during their first season in the garden.
• Soil wetting agents allow water to penetrate more quickly than soil, so water daily during the growing season for best results.

Staking & Training
• Standards and weeping standards will require a permanent and strong stake for support.
• Weeping roses can be trained by using a 'rose hoop', so that it’s easy to tie the branches to develop a lovely shape.

Feeding
• Feed roses at regular 4-week intervals from spring to autumn.
• A fortnightly liquid feed, with a combination of Seasoil and Powerfeed, is a great addition to your rose feeding program. This combination provides all the nutrients required for healthy plant growth.

Mulching
• Use coarse grade mulch applied to the soil at a depth of 5-10cm, leaving a 15cm bare circle around the main stem. Never heap mulch or soil up around the stem.

Rootstock
One of the main virtues of grafting onto Fortuniana rootstock is its vigour and hardiness. If you see bright green foliage appearing from below the graft of the plant, simply break it off and discard.

Common Diseases & Pests
• Black Spot and Powdery Mildew are common rose fungal leaf diseases. They are most prevalent in early-mid spring and again in mid-late autumn when nights are often cool and damp. Diseases are also more likely on roses growing in too much shade. To Control Black Spot and Powdery Mildew spray with fungicides such as Eco Fungicide (used in conjunction with Eco Oil), Rose Shield, Triforine or Sharp Shooter Rose Black Spot and Pyrethrum Concentrate. Better still is preventative spraying, every fortnight over mid-spring and again in mid-late autumn.
• Avoid overhead watering and water in the evening wherever possible.
• Control aphids and thrips with systemic insecticide, used monthly. Environmentally friendly sprays are available at Dawson’s.
• Red spider mites are the most troublesome pests of roses over the warmer months. Spray with Mavrik*, Natrasoap* , Eco Neem* or Eco-Oil*. Spray twice, two weeks apart, to bring mite populations under control. Preparatory mites can also be ordered from your nearest Dawson’s store. Preparatory mites feed on spider mites, offering a natural way to control them in your garden. For more information, enquire in-store or see our Preparatory Mite Fact Sheet at www.dawsonsgardenworld.com.au.
• White Rose Scale - spray with Eco-Oil* or White Oil*. Severely infested canes should be pruned out at pruning time.
• Herbicide Damage - don’t use Glyphosate herbicides near your roses; they’re very sensitive to Glyphosate damage and this causes distorted ‘witches broom’ looking foliage.

*During the warmer months, don’t spray during the heat of the day, or when temperatures exceed 35°C.

Pruning the easy way
The object of pruning is to shape the bush and promote new blooms. Pruning is done every year in winter while plants are dormant, before new spring growth appears.
• Before starting, make sure pruning tools are clean and sharp.
• Hybrid tea roses, miniatures and floribunda roses can simply be cut back to half of their original height, using secateurs, loppers or even hedge shears.
• Tidy up by removing any crossing branches, diseased older wood or branches growing into the centre of the bush.
• David Austin rose bushes are best pruned by removing one third of their original height each winter.
• Climbing roses should be pruned and trained to restrict them from growing straight up. This is best done by tying new canes to a horizontal position or by arching into a fan shape.
• Weeping standard roses and shrub roses are best clipped and shaped with hedge shears. This can be done continuously after each flowering.
• Immediately after pruning, thoroughly spray bushes with Lime Sulphur.
